SUMMARY

Full-stack engineer with 2+ years of experience building web platforms, mobile apps and AI features with React, TypeScript, FastAPI, Python and Flutter. At Metaviz AI, working mainly on a Swiss field-service marketplace: React web app, FastAPI backend, payments (TWINT, subscriptions), passwordless sign-in, AI assistant integration and technical SEO. Since September 2026 also frontend SEO and performance work on a travel marketplace and a property marketplace. Earlier Flutter and Strapi work for fitness, nutrition, e-commerce and wellness clients.

EXPERIENCE

Software engineer, Flutter and full-stack · Metaviz AI

Aug 2025 - Present

Remote

Started on Flutter apps and Strapi backends for fitness, nutrition, e-commerce and wellness clients. Since December 2025 I've worked mainly on a Swiss field-service marketplace: its React web app, FastAPI backend, payments, passwordless sign-in and technical SEO. Since September 2026 I've also done frontend, SEO and performance work on a travel marketplace and a property marketplace.

Field-service marketplace (Dec 2025 - Present): Main contributor to the React + TypeScript web app, and a regular contributor to the FastAPI backend. Integrated the platform's AI assistant into the web app: structured job requests, role-based entry points and voice input. Built on-site payments with TWINT and tap-to-pay, plus subscription billing in the backend.

Safari travel marketplace (Sep 2026 - Present): Halved the main JavaScript file (1,074 KB → 540 KB) and cut a park page from 13.1 MB to 1.6 MB, so phones download far less. Made the site readable to Google in six languages: the home page and 60 of 60 checked business profiles now declare their language and link every version, where before all of them looked English.

Property marketplace (Sep 2026 - Present): Made the first page load 24% lighter (727 KB → 553 KB of compressed JavaScript) by loading two heavy libraries only when needed. Cleaned up the pages Google crawls: 36,675 → 27,924 URLs, removing 6,162 old-format listing links and 260 thin or blocked pages, so only real listings are left.

Healthy-grocery delivery app (Dec 2025 - Jan 2026): Built product filters by brand, category, diet and ingredient. Added location handling for delivery and in-app URL navigation.

Wellness & accountability app (Nov 2025 - Dec 2025): Designed the Strapi data models behind check-ins, content and the in-app shop. Added the OTP sign-in setup and seed data used during development.

Calorie & nutrition tracking app (Oct 2025): Built the Flutter app for tracking meals, calories and daily nutrition goals.

E-commerce shopping app (Sep 2025): Built the Flutter shopping app: categories, filters, favourites, cart, saved addresses, orders and onboarding. Set up the Strapi backend and its data models for products, categories, orders and payments. Added card payments with Stripe, confirmed on the server rather than in the app.

AI fitness coaching app (Sep 2025): Built the full Flutter frontend: onboarding, personalised workout and meal plans, and progress screens. Built body-metrics tracking with light and dark themes. Built the AI coach chat with conversation history, using Provider for state.

Final year and independent projects · University of Gujrat

May 2024 - Jul 2025

Gujrat, Pakistan

Finished my BS in Computer Science with a Unity final-year project, and published a Flutter app on Google Play.

Chrono Chase (Sep 2024 - May 2025): Worked on menus, profile pages, scoring, and the shop and power-up systems in Unity (C#).

QR Scanner (Jul 2024 - Sep 2024): Built real-time QR scanning and generation, with saving to the phone's gallery. Published and maintained the app on Google Play.

Dialogflow chatbot (Jun 2025): Connected a Flutter chat interface to Dialogflow ES for intent-based answers. Managed chat state with BLoC and kept the service credentials out of the repository.

Flutter developer intern · Business Incubation Center, University of Gujrat

Nov 2023 - Apr 2024

Gujrat, Pakistan

Six-month internship building a real-time blood-donor app with Firebase.

Digitalize Blood Bank (Nov 2023 - Apr 2024): Built location-based donor matching with Firebase Auth, Firestore and push notifications. Added in-app messaging between donors and requesters.

SELECTED PERSONAL PROJECTS

MindMemo: A private AI assistant that runs fully on the phone. No cloud, and it remembers you between chats.

Lead research pipeline: A well-tested Python tool that collects public business data, cleans it and removes duplicates.

Health Tracker: Flutter fitness app for workouts, plans, mood, hydration and weight, with 15 unit and widget tests.

SKILLS

Web	React + TypeScript · Vite, Tailwind CSS · Technical SEO (pre-rendering, JSON-LD, hreflang) · End-to-end tests (Playwright)
Backend	FastAPI, SQLAlchemy, Alembic · Celery background jobs · Strapi (headless CMS) · Passkeys / WebAuthn
Mobile	Flutter + Dart · Provider, BLoC · Firebase (Auth, Realtime DB, FCM) · Google Maps, Places, geolocation
Payments	Stripe (PaymentSheet, subscriptions) · TWINT and tap-to-pay flows
AI	On-device LLMs (llama.cpp) · Claude API, n8n workflows · AI assistant integration · Dialogflow
Data & quality	Python, pandas ETL · pytest, mypy, ruff · PostgreSQL, SQLite · GitHub Actions CI

EDUCATION

BS Computer Science, University of Gujrat, Pakistan (Nov 2021 - May 2025)
